

# DisplayBuddy

Control external displays directly from your Mac.

DisplayBuddy lets you control external displays connected to your Mac right from your menu bar! No need to touch those clunky monitor buttons! It has been tested on a wide range of monitors from manufacturers such as Dell, Acer, LG, Samsung, BenQ & PRISM, and works with most displays manufactured in the last 5 years. DisplayBuddy can also control the volume for monitors with built-in speakers. If DisplayBuddy doesn't work as expected for you, you can refund your purchase within 7 days.

## Features

- Control your monitor's **brightness** & **contrast** directly from your Mac **menu bar**.
- Control the **volume** for monitors with **built-in speakers**.
- Switch **monitor inputs** (HDMI, DisplayPort etc) directly from the app.
- Support for **Apple Silicon** (M1) Macs using **software emulation**.
- Effortlessly **manage multiple displays** with ease & even **sync controls** across them.
- Save settings across displays as **Presets**, and activate them later with a single click!
- Looks great in both **Light** & **Dark** modes.

## Compatibility

DisplayBuddy supports all Intel based Macs. Apple Silicon (M1) Macs are also supported, with the exception of DDC/CI control. Supports macOS 10.13+ (High Sierra)

## Pricing

US \$8.99

7-day refund guarantee if it doesn't work.

## Future

- Big Sur App Redesign

## Review download + press license

If you'd like to review DisplayBuddy and haven't received an email with the download link and license, please let me know: [sids@outlook.com](mailto:sids@outlook.com) / [support@displaybuddy.app](mailto:support@displaybuddy.app)

## About the developer

Sid is an indie developer based in Singapore, and has been making iOS & Mac apps professionally for the past 6 years. He's also an avid open source contributor.
